All-Wheel Drive

Range (EPA est.): 325 miles

Acceleration: 4.1 s 0-60 mph

Top Speed: 112 mph

Drive: All-Wheel Drive

Towing: 11,000 lbs

Seating: 5 Adults

Bring It All

Weekend road trips, outdoor adventures or a day at the job site—with up to 120 cubic feet of cargo space, you can bring along everything you need. Second-row seat cushions fold up for even more storage.

Power On Tap

Two 120 V outlets in the cabin. Two 120 V outlets in the truck bed (plus one 240 V outlet for even more power). Together, they deliver up to 9.6 kW of total electric power, so you can plug in everything from air compressors to heavy-duty power tools.

Full Range of Motion

Steer-by-wire technology combined with rear steering makes it easier to complete tight turns and quick maneuvers with minor input. With just a small turn of the steering wheel, you can unlock the full range of motion of your front and rear wheels.

Lockable Storage

Lock it up and keep it hidden in the cabin or front trunk. Add a payload of up to 2,500 pounds to your truck bed and use the lockable aluminum tonneau cover to secure whatever you can fit inside, turning your truck bed into a six-foot vault. Plus it adds up to 13 miles of range when deployed.

Throw Anything at It

Exterior body panels are made from stainless steel, making your truck tough on the outside to keep you safe on the inside. Cabin windows and glass roof have shatter-resistant armor glass that can handle the impact of hail the size of a baseball (or an actual baseball).

Ready When You Are

With driver profiles, your Cybertruck will automatically adjust your seat and wheel position to your preferences. Use the Tesla app before you get in, or the front and rear touchscreens when you're on your way, to adjust climate and activate heated and cooled seats for everyone.

Enter Another World

Adaptive suspension can lower the entry height for easy access when you get in. Close the doors and enjoy expansive views of the road while 360-degree acoustic glass creates the quietest ride you've ever had in a truck. An all-glass roof offers views of the sky while filtering out UV light, keeping passengers cool when the sun is overhead.

Take on Any Terrain

For city driving and off-roading, adapt your driving style to match your task or terrain. Drive modes are designed to be versatile and reliable, so you can go anywhere. Use the center touchscreen to turn on trailer mode and store your profiles, input your towing load details or select your driving mode to match your terrain.

The Future of Travel Is Autonomous

Cybertruck is available with Full Self-Driving (Supervised), a suite of advanced driver-assistance features designed to provide more active guidance and assisted driving under your active supervision.

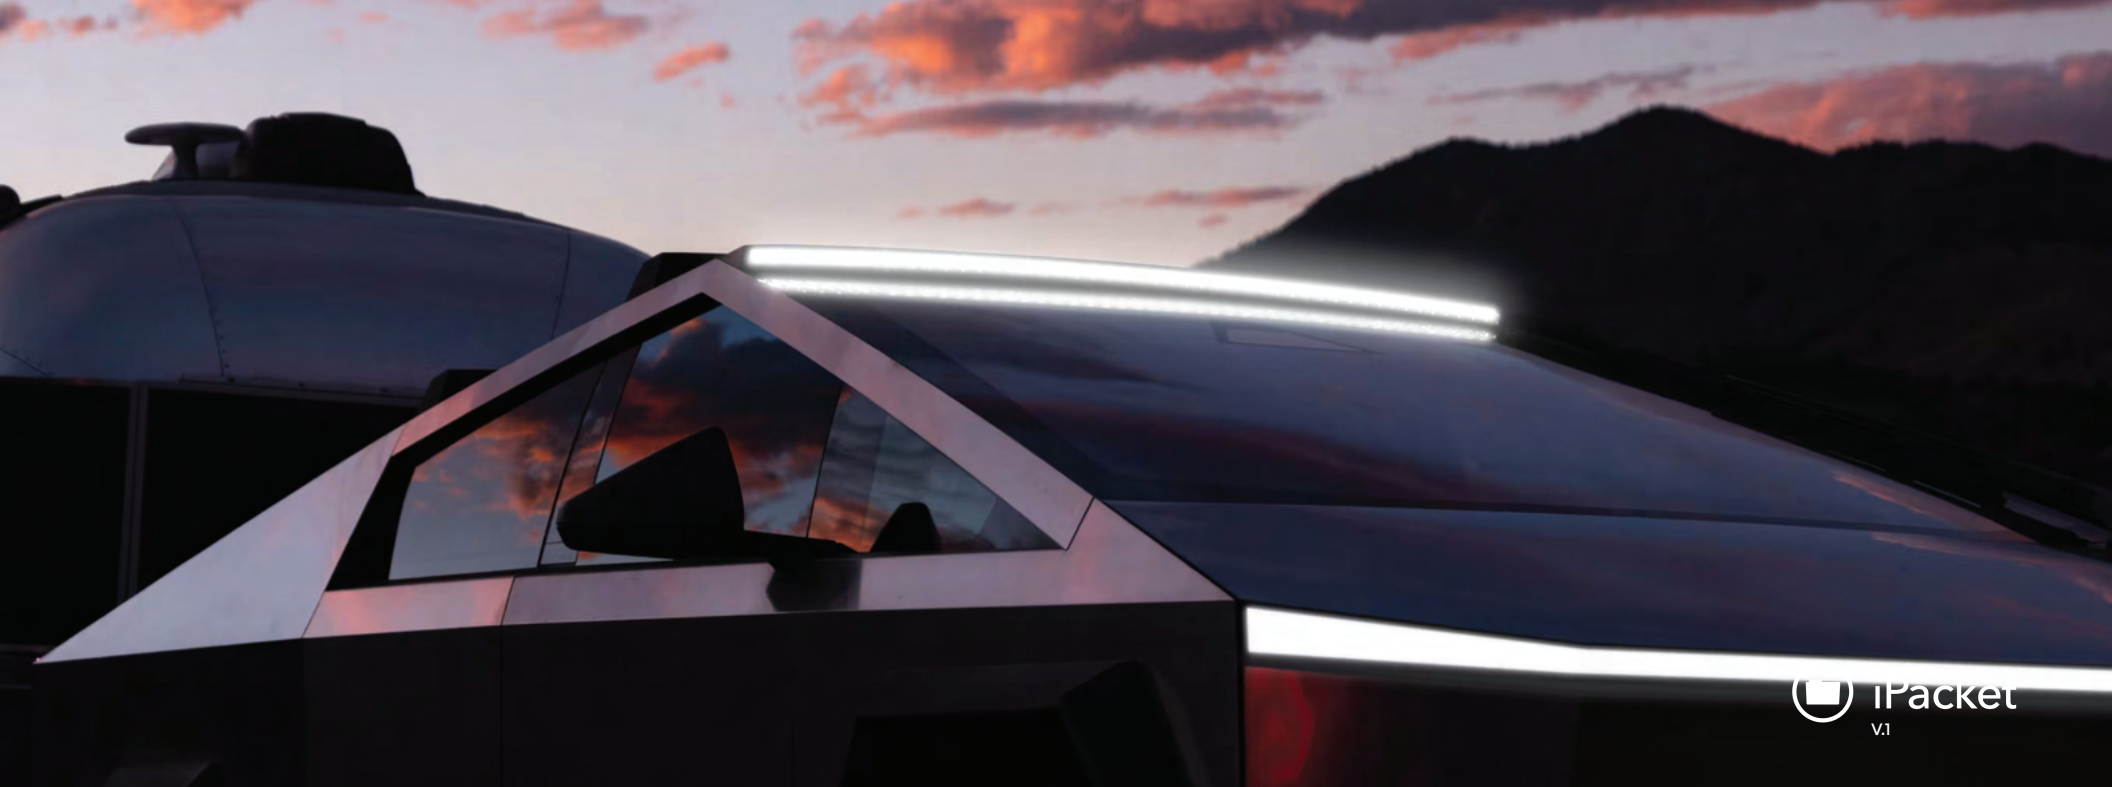

Engineered for Your Safety

Active safety features can help reduce impact severity or help prevent accidents altogether. Forward Collision Warning, Active Emergency Braking and Lane Departure Avoidance come standard.

Protect Your Truck

Enable Sentry Mode to monitor your unattended vehicle and automatically activate the alarm, increase the touchscreen brightness and play music at max volume if a threat is detected.

Crossbars

Transport up to 200 pounds of cargo, maximizing your storage space for bikes, gear mounts and more. Quick-release attachments and telescoping crossbars enable easy installation on any mounting points.

Mud Flaps

Designed for durability to protect your Cybertruck from snow, salt, sand and small debris.

Cargo Divider

Constructed from a lightweight, rigid aluminum and can be installed anywhere along the truck bed's L-track for added customization, utility and security. Secure loose items and mount accessories to the MOLLE panel.

Tailgate Ramp

Make loading and unloading easy. Lightweight and easy to install, this ramp can be used individually to move up to 750 pounds of gear or in pairs to load four-wheel vehicles like Cyberquad (sold separately).

Off-Road Lightbar

Off-road after dark. A high-performance light bar that uses LED optical technology to cast a powerful, uniform light beam onto the trail ahead. Control angle, intensity and more through the touchscreen.

Truck Bed Textile Mat

Keep your bed clean and your cargo protected. Constructed from a waterproof textured fabric for extra durability.

Power Anything With Cybertruck

Powershare allows you to draw up to 11.5 kW of continuous power directly from Cybertruck's 123 kWh battery. Home backup requires Powershare Gateway and Universal Wall Connector or Powerwall with a Wall Connector. No additional hardware is needed to use onboard outlets.

3 Days
